

BIODEGRADABLE & DISPLAYS

BUILT TO FISH. BUILT TO LAST.

4008 & 5008 Bio Tuff 'Tainers®

Flambeau® Eko-Plas™ Resin

- Allows Microbes to break down the structure of the resin when placed in a landfill
- Completely breaks down in 1-5 years leaving Bio-Mass (highly nutritious soil)
- Not broken down by heat, moisture, UV, or mechanical stress. Indefinite shelf life until placed in an active microbial environment (landfill).
- Working components of material are 100% organic
- Features high value removable latches

How Does It Work?

Molecular structure of the plastic contains nutrients and other organic compounds within the polymer chain. This material allows microbial action within a landfill to colonize in and around the plastic. These microbes secrete enzymes which digest and break down the entire polymer chain.

Tuff 'Tainer® Displays®

These Tuff 'Tainer® displays tell the Zerust® and Biodegradable story at point of sale to increase your sales
